wigsmi

Bring try-on to *your* shop.

The retailer's how-to guide for embedding the Wigsmi virtual try-on on your own website, in minutes and with no developer.

RETAILER EMBED GUIDE · 2026

01 · THE IDEA

Your wigs, on her photo, on your website.

The Wigsmi widget is a small try-on gallery that sits on your shop. It shows your own published wigs with your logo and colours. A shopper taps a style, adds a selfie and sees the wig on herself before she buys.

You publish

Add your wigs in the Wigsmi portal.

You paste

Two lines of code on your site.

She tries

She picks a wig and sees it on her own photo.

She buys

Back to your product page, ready to check out.

Why retailers love it

- [ ] Always live: add or unpublish a wig in the portal and your shop updates on its own.
- [ ] Nothing to host: no images or files to upload to your website.
- [ ] On brand: your logo, accent colour and button text.
- [ ] Works on Shopify, WooCommerce, Wix, Squarespace, Webflow and hand-coded sites.

02 · STEP BY STEP

Live in five steps.

1 Create your retailer account

Sign up at wigsmi.com/retailer and start your one-month free trial.

2 Add and publish your wigs

In the portal, open Catalogue and press Add wig. Add clear photos, name, price and your product link, then publish. Only published, in-stock wigs appear in the widget.

3 Create your widget

Open Widget in the portal and press Create my widget. Set your button text and accent colour.

4 Copy your snippet

Press Copy snippet. It looks like this, with your own private code:

```
<script async src="https://wigsmi.com/embed/widget.js"
  data-wigsmi-token="YOUR-CODE"></script>
<div data-wigsmi-widget></div>
```

5 Paste it on your site

Place it on a product page, your home page or a dedicated "Try it on" page. Platform steps are on the next page.

Where to paste it.

Shopify

1. Online Store, then Themes, then Customise.
2. Open the page or product template.
3. Add section, choose Custom Liquid.
4. Paste the snippet and Save.

WooCommerce

1. Edit the page in WordPress.
2. Add a Custom HTML block.
3. Paste the snippet.
4. Update and view the page.

Wix

1. Open the Editor.
2. Add, then Embed Code, then Embed HTML.
3. Choose Code and paste the snippet.
4. Resize the box and Publish.

Squarespace

1. Edit the page.
2. Add a Code block.
3. Paste the snippet, set to HTML.
4. Save and preview.

Webflow

1. Open the Designer.
2. Drag in an Embed element.
3. Paste the snippet.
4. Save and Publish.

Hand-coded sites

1. Open the page HTML.
2. Paste where the gallery should show.
3. Upload the page.
4. Refresh to check.

Tip: some builders only run code on the published site, not in the editor preview. Publish, then check your live page.

Your widget, your rules.

STARTER	GROWTH	SCALE
5,000	50,000	Unlimited
widget views a month	widget views a month	widget views

Managing it from the portal

- Change button text and accent colour at any time.
- Pause the widget whenever you need to.
- Rotate your code if it has been shared. The old snippet stops working straight away, so paste the new one on your site at once.
- The gallery shows up to 12 of your wigs, featured first, with a "Browse all styles on Wigsmi" option for shoppers.

If the box says "No wigs yet"

Check that at least one wig is published and in stock in your Catalogue.

05 · LAUNCH CHECKLIST

Before you go live.

- [ ] Retailer account created and trial started
- [ ] Logo and brand colour added
- [ ] Wigs added with clear, front-facing photos
- [ ] Every wig has the right price and product link
- [ ] Wigs published and marked in stock
- [ ] Widget created and button text set
- [ ] Snippet pasted and site published
- [ ] Tested on a phone: pick a wig, upload a selfie, see the result
- [ ] Tested the link back to your product page

Ready when you are.

Start your free month at **wigsmi.com/retailer** and have try-on on your shop today.

Wigsmi is a trading name of Sherwood Consulting Services Ltd.
